

Introduction of AOTAS modules and source code

- Module Overview

Module Name	Description
Download	Download data files To download dataset data files from source and save to ' raw ' folder, using the original format, ' csv '.
ETL Module	Read 'raw' data, perform cleansing transformation and save to 'processed' location
Integration Module	Read 'processed' data, conduct data warehouse modeling, create dimension/fact tables and save to 'integration' location
Utility Module	Provide common utilities that will be used throughout the pipeline process

- Module details

Module	Scripts		
Top Entry point	<p>.AOTA_main.py.</p> <ul style="list-style-type: none">• Entry point of the pipeline• It will run the main file of download module, ETL module , and integration module to complete their duties.		
Download Module			
	Description	To download dataset data files from source and save to 'raw' folder, using the original format, 'csv'.	
	Entry point file	download_manager.py	
	Major Files	downloader.py– to provide tools/methods to download flight time dataset	
		Two major methods	
	Method	Description	

	<table> <tr> <td>download_small_dataset</td><td>To download following small datasets: airport, carrier, plane</td></tr> <tr> <td>download_dataset_flight</td><td>To download flight time dataset of multiple years (specified in array 'flight_dfiles')</td></tr> </table>	download_small_dataset	To download following small datasets: airport, carrier, plane	download_dataset_flight	To download flight time dataset of multiple years (specified in array 'flight_dfiles')		
download_small_dataset	To download following small datasets: airport, carrier, plane						
download_dataset_flight	To download flight time dataset of multiple years (specified in array 'flight_dfiles')						
ETL Module	<table> <tr> <td>Description</td><td>Provide following functionalities: <ol style="list-style-type: none"> 1. Read data from 'raw' files, 2. perform cleansing/transformation 3. save to 'processed' folder, using 'parquet' </td></tr> <tr> <td>EntryPoint File</td><td>ETL_Manager.py</td></tr> <tr> <td>Major Files</td><td> ETL_Airport.py: to process airport data ETL_Carrier.py: to process carrier data ETL_Plane.py: to process plane data ETL_Flight.py: to process flight data </td></tr> </table>	Description	Provide following functionalities: <ol style="list-style-type: none"> 1. Read data from 'raw' files, 2. perform cleansing/transformation 3. save to 'processed' folder, using 'parquet' 	EntryPoint File	ETL_Manager.py	Major Files	ETL_Airport.py : to process airport data ETL_Carrier.py : to process carrier data ETL_Plane.py : to process plane data ETL_Flight.py : to process flight data
Description	Provide following functionalities: <ol style="list-style-type: none"> 1. Read data from 'raw' files, 2. perform cleansing/transformation 3. save to 'processed' folder, using 'parquet' 						
EntryPoint File	ETL_Manager.py						
Major Files	ETL_Airport.py : to process airport data ETL_Carrier.py : to process carrier data ETL_Plane.py : to process plane data ETL_Flight.py : to process flight data						
Integration Module	<table> <tr> <td>Description</td><td>Provide following functionalities : <ol style="list-style-type: none"> 1. Read data from 'process' files, 2. Perform DW modeling, 3. Create dimension table and fact table datasets 4. Save to 'integration' folder, using 'parquet' </td></tr> <tr> <td>EntryPoint File</td><td>intgr_Manager.py</td></tr> <tr> <td>Major Files</td><td> 1.Intgr_stg_table.py (main method: <code>cr_stg_flight</code>) Read 'processed' flight data and create a staging table dataset, stg_flight, which works as a temp table for downstream processes. It will be saved to "integrated" folder, using "parquet" 2.Intgr_dim_table.py Read data from "processed" folder and use 'STG_FLIGHT' data created in step 1, create following dimension table datasets and save to "integration" folder, using "parquet". dim_plane dim_origin_dest dim_date dim_carrier </td></tr> </table>	Description	Provide following functionalities : <ol style="list-style-type: none"> 1. Read data from 'process' files, 2. Perform DW modeling, 3. Create dimension table and fact table datasets 4. Save to 'integration' folder, using 'parquet' 	EntryPoint File	intgr_Manager.py	Major Files	1.Intgr_stg_table.py (main method: <code>cr_stg_flight</code>) Read 'processed' flight data and create a staging table dataset, stg_flight , which works as a temp table for downstream processes.
