OOP project Screen Output Specification

Here is the list of screen output images and their descriptions

Customer Manager -

File	Operation	Note
Customer_input_1.png customer_input_2.png	Customer creation	Successful creation for customer where id= 1, 2, 3,4, 5, or 6
customer_input_3_invalid .png	Customer creation	customer creation **failure:** when entering a new customer where (name, address) already in system

Account Manager

File	Operation	Note
account_creation_01_succuss.png	Account creation (checking or savings)	Successful creations
account_creation_02_failure.png	Account creation	Showing failures, which include following scenarios: ● Invalid menu option ● .Transaction failure due to invalid account no (not found in system) ● .Invalid input value (account balance's type was not numeric
	Assign account to a customer	(not ready yet)

Transaction manager (account withdrawal or deposit)

File	Operation	Note
transaction_01.png	Account transaction: (withdraw or deposit)	1.Showing some successful transactions. 2.Note that the highlighted test case shows special business logic: when desired withdrawal amount is more than account balance, the actual withdrawn amount was the balance.

transaction_02.png	Account transaction: (withdraw or deposit)t	Showing successful transactions
transaction_02_inv alid.png	Account transaction: (withdraw or deposit)t	Showing operations or transaction failures, include ● .Invalid menu option ● .Transaction failure due to invalid account no (not found in system) ● .Invalid input value (transaction amount's type was not numeric)
